DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Inventorship

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Specification

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 5, 7 and 8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Said claims are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. Specifically, said claims incorporate the term "beforehand" as follows:

Claim 5, line 4; Claim 7, line 3; Claim 8, line 3 (2 occurrences). It is unclear what preceding event the term "beforehand" refers to. Before operation of the device?

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Patent Number 4,969,549 by Eglise. The token and coin handling apparatus disclosed by Eglise incorporated interrogator 6 that validates the authenticity of both coins and tokens. Said tokens read on Applicant's coin-type IC cards. Said interrogator is a "coin validation apparatus for discriminating between acceptable coins and non-acceptable items [also] being able to discriminate tokens and [] to direct discriminated tokens along a path [] different from a path along which said non-accepted items are directed"

Art Unit: 3653

(column 1, lines 42 plus). Furthermore, "if the received item is a non-genuine coin [] the item is delivered to a return chute" (column 1, lines 30 plus).

Allowable Subject Matter

Claims 3, 4, 6 and 9-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The following related art made of record and not relied upon is considered pertinent to applicant's disclosure:

Patent Number US 6,309,098 B1 by Wong because of its read-write mechanism 100,

Patent Number 6,026,367 by Hjelmvik because of its central computer 9,

Patent Number 4,465,173 by Demen et al because of its coin judging section 1, and

United Kingdom Patent Application Publication Number GB 2 153 128 A published 14 August 1985 because of its validator 4.
